

RECOUP

Environmental Policy

RECOUP aims to increase plastics recycling and promote resource management through demonstrating and supporting good practices, efficiency, and expertise.

RECOUP acknowledges its responsibility to protect the environment. Our goal is to have a positive environmental impact via the provision of our services and improvements to our internal operations.

We ensure that as an organisation, we aim to:

- Stimulate the development of sustainable plastics waste and resource management.
- Undertake research and analysis to identify good practices and remove barriers to developing efficient plastics recycling systems.
- Promote the use of recycled plastics in high-quality end products.
- Provide and deliver information and education resources to increase and drive plastics recycling and resource management in the UK.
- Preserve and protect the physical and natural environment for the public benefit by promoting waste reduction and recycling.
- Comply with relevant environmental legislation and codes of practice as a minimum.

We aim to minimise the impact of our own operations through:

Resource Efficiency

- monitor and reduce our CO2 emissions and minimise resource consumption

Procurement

- procure with consideration of durability, reusability, and recyclability

Travel

- reduce impacts associated with travel through minimising the requirement for travel, encouraging improved travel planning and promoting sustainable transport options

Building

- improve RECOUP's building and sites environmental performance

Event Management

- run events in consideration of sustainable event practices

Commitment, community, and communication

- set targets towards continual improvement in Action Plan and review it annually
- participate in the environmentally beneficial initiatives as a team
- communicate this policy throughout the company, to the stakeholders and the public
